Subject:

Rush search request for 09/762577

Please search in commercial database, issued patent files, pGPUB and interference:

1) Oligomer search for SEQ ID NO:11

2) Oligomer search for the nucleic acid encoding SEQ ID NO:12.

Thank you.

MINH TAM DAVIS

The invention relates to an antisense oligonucleotide targeted to nucleic acid encoding Livin and that specifically hybridises with nucleic acid encoding Livin and inhibits expression of Livin. The antisense oligonucleotide is useful for preparing a composition for treating hyperproliferative disorder or aberrant apoptosis. The presequence represents human livin DNA.

The present

the

New antisense oligonucleotide, having a sequence targeted to a nucleic acid encoding Livin, useful for preparing a composition for treating hyperproliferative disorder or aberrant apoptosis.

Example 13; SEQ ID NO 4; 60pp; English.

The invention relates to a method of screening for nucleic acid molecules CC that show altered expression in a first cell sample comprising comparing CC that show altered expression in a first cell sample comprising comparing CC sample, where the first sample has been grown in the presence of butyrate CC or a related carbon source from which butyrate is directly or indirectly CC derived, but the reference sample has been grown in the presence of butyrate CC derived, but the reference sample has not. The invention also relates to the initiation and/or progression of colorectal cancer in an animal, CC comprising providing at least one nucleic acid molecule associated with CC comprising providing a biological sample comprising at least one cell to be tested, contacting the sample which binds to at least one nucleic acid and CC nucleic acid molecule) which binds to at least one mucleic acid and CC detecting the presence of at least one molecule in the sample, a method CC and/or progression of colorectal cancer in an animal comprising providing CC a biological sample comprising at least one cell to be tested, contacting CC the sample with at least one ligand that specifically binds at least one polympetide encoded by a nucleic acid or a variant polypeptide comprising CC an amino acid sequence which varies by the addition, deletion or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁

cc substitution of at least one amino acid residue and detecting the cc presence of the polypeptide in the sample, a method of screening for cagents that modulate the activity of at least one polypeptide encoded by cancer comprising forming a preparation and/or progression of colorectal cancer comprising forming a preparation comprising at least one polypeptide encoded by a nucleic acid or a variant polypeptide comprising cat least one addition, deletion or substitution and at least one agent to be tested and determining the activity of the agent with respect to comprision identified by the method, for use as a pharmaceutical. The methods are useful for screening for nucleic acid molecules that show a ltered expression in a cell sample, and for detecting a nucleic acid and a polypeptide respectively, that are associated with the initiation can apolypeptide encoded by a gene associated with the initiation can seful for screening for agents that modulate the activity of at least one polypeptide encoded by a gene associated with the initiation cand/or progression of cancer, where agents identified by the methods are useful for treating colorectal cancer. The methods could also be used to detect or monitor other conditions such as colitis, Crohn's disease or concerous growth. This sequence represents a human nucleic acid cancer cancerous growth. This sequence represents a human nucleic acid coldentified by the screening method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

CC The present invention describes an isolated nucleic acid molecule, which CC comprises the sequence of any of the genes that are up-regulated or down-cc regulated in specific cancers (e.g. about 1031 genes up-regulated in cc acute lymphocytic leukemia). ACC72641 to ACC72860 represent cancer CC abs58521 to ABR58709. Also described: (1) determining the presence or CC absence of a pathological cell in a patient; (2) an expression vector CC comprising the vector; (4) an isolated polypeptide, which is encoded by CC comprising the vector; (4) an isolated polypeptide, which is encoded by CC comprising the vector; (4) an isolated polypeptide, which is encoded by CC comprising the vector; (5) an antibody that specifically binds the polypeptide cof (4); (6) specifically targeting a compound to a pathological cell in a CC patient by administering to the patient the antibody above; and (7) a CC drug screening assay. The nucleic acid is useful as diagnostic markers or CC diagnosing apathology, e.g. cancer (e.g. cancer of the bone marrow, CC pancreas, prostate, skin and uterus), wounds, ischaemia, heart diseases, CC drug screening, particularly for identifying agents for treating these CC pathologies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
